References:

When used with sterile connection technology:
- Provides closed blood delivery system
- Maintains primary unit expiration date
- Maximizes usage of adult size blood units
- Limits neonatal donor exposure
- Reduces aliquot preparation costs

Safe and cost-effective system
Needleless design prevents accidental needle sticks, meets OSHA requirements, and complies with national needle stick safety laws.
Provides 40μ final filtration in accordance with AABB blood administration requirements.
Syringe blood aliquots must be administered to patient within 24 hours.
Filter hold-up volume is less than 5mL.

BD is a trademark of Becker, Dickerson, and Company
Monoject is a trademark of Covidien AG
